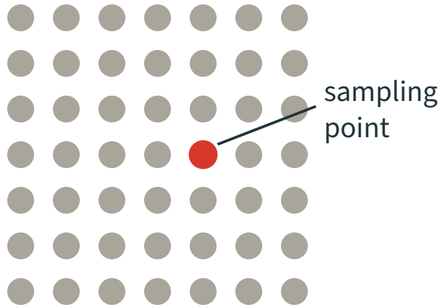
Spatial representativeness of a sampling point

Dir. (EU) 2024/2881 · Impl. Dec. (EU) 2026/1208 · applicable from 30 June 2028

1 The point

Central value C



measurements: annual mean measured at the point

models: annual mean modelled at the point

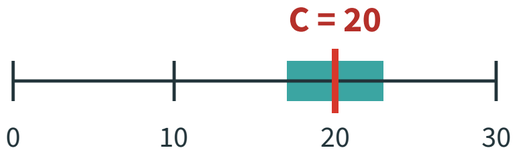
other metrics only if justified

measurements · models · both

2 The tolerance

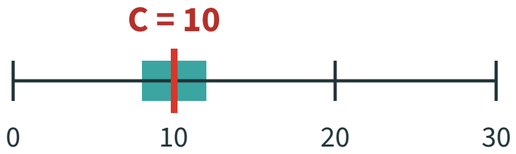
tolerance = max(15 % · C ; Annex I minimum)

example · PM10 · µg/m³



15 % of 20 = 3 > minimum 2

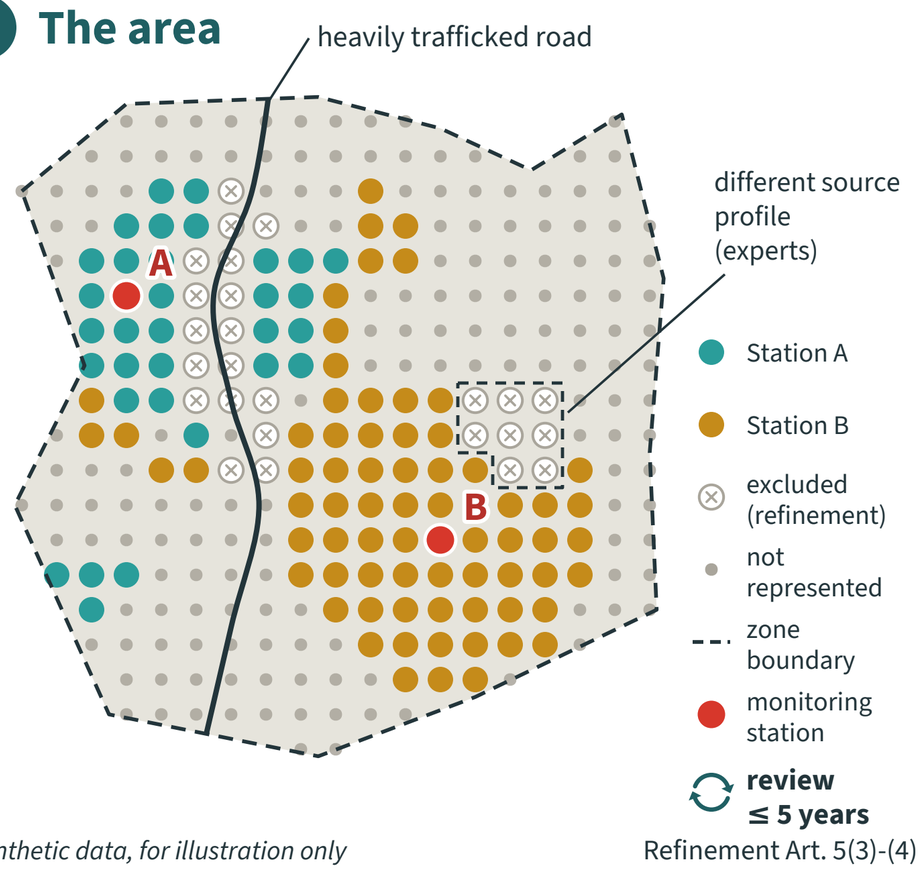
interval 17 – 23



15 % of 10 = 1.5 < minimum 2

minimum applies: 8 – 12

3 The area



synthetic data, for illustration only

Refinement Art. 5(3)-(4)

Spatial representativeness (Dir. Art. 3): the air quality metrics observed at the point are representative of an explicitly delineated area, within which the metrics do not differ from those at the point by more than a pre-defined tolerance level.
